Saint Louis University (SLU)
Promoting Child Health Equity by Addressing Resource Insecurities in Pediatric Clinical Settings

SLU and Cardinal Glennon will partner to develop, implement and evaluate a clinic to community (CCI) model that will provide robust case management services to Medicaid patients accessing well child visits. Major activities include: creation of a community advisory committee to inform the model, training for pediatricians to implement resource need screenings in a culturally appropriate manner, expansion of available resources and services for patients to access including safety net programs, and health advocates who follow up with families for one year to ensure referral success. If successful, these activities will result in an increased number of low-income children completing well child visits, an increase in the number of successful referrals, and a decrease in food insecurity.

Affinia Healthcare
Managing Medications and Follow-up Care for Hypertensive Adults

This project increases access to care for hypertensive adults by having an underutilized PhD level pharmacist assist medical providers in providing follow-up care and education. It pilots systematic change using a team approach so organizations can address provider shortages that currently don’t allow for timely follow-up care for hypertensive patients.

Freeman Health System
Community Care for Individuals with Complex Needs

Redesign the health and social service environment for individuals with complex needs, so they are at the center of a high-functioning system and receive high-quality health care and the social supports needed to improve their health outcomes and quality of life.

Southwest Region \ Newton

Randolph County Caring Community Partnership
Accountable Health Communities Project

The project will consist of the design, development, and delivery of an Accountable Health Community (ACH) model that will utilize care coordination services and systems navigation through the incorporation of Community Health Workers (CHW). The AHC model addresses health-related social needs that impede clients from sufficiently and affectively accessing health care.

Northeast Region \ Randolph
Spectrum Health Care
Access for All

Spectrum Health Care, proposes to address the access needs of the communities of people in Mid-Missouri. The project will establish a new primary health care clinic in Boone County; provide patient navigation into care through three full-time Community Health Workers; and develop a Spectrum Rural Providers Network that is committed to providing patients a safe, affirming and culturally competent care experience.

Central Region \ Boone

Washington University
Implementing a Community-Based Model to Provide Healthcare for the Community

The proposal will initiate a state-of-the-art primary geriatric and subspecialty care clinic staffed by Washington University geriatricians at Covenant Place (CP). The new medical clinic will increase referrals to subspecialists, key interdisciplinary team members and reduce emergency room visits and re-hospitalization rates
